DETAILED ACTION

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

2. Claims 1 and 4 rejected under 35 U.S.C. 102(e) as being anticipated by Gilbreth (6552440).

The applied reference has a common inventor with the instant application.

Based upon the earlier effective U.S. filing date of the reference, it constitutes prior art under 35 U.S.C. 102(e). This rejection under 35 U.S.C. 102(e) might be overcome either by a showing under 37 CFR 1.132 that any invention disclosed but not claimed in the reference was derived from the inventor of this application and is thus not the invention "by another," or by an appropriate showing under 37 CFR 1.131.

Gilbreth discloses an integrated turbo-generator system in fig. 1-3, comprising: a turbine (31), a compressor (30) rotationally coupled to the turbine (for rotating therewith to generate compressed air); a combustor (14) fluidly coupled to the compressor (for combusting fuel and the compressed air therein to generate exhaust gas to drive the turbine); a generator (12) rotationally coupled to the turbine (for rotating therewith to generate electric power); and an electrically resistive device (170) connected to the generator to selectively dissipate a portion of the generated power and a controller(40).

Claim Rejections - 35 USC § 103

3. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

4. Claims 2-3,5-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Gilbreth (6552440) in view of Schutte (2910054).

Gilbreth substantially disclose the claim features. However, Gilbreth do not disclose the resistor device to channel air over the resistive device and into the compressor.

Schutte teaches a combustive device in fig.1.comprising: a power generator (G2) connected to the controller (multivibrator), an air intake disposed in a preselected relationship to the resistive device to channel air over the resistive device (R3) and into the compressor for the purpose of presenting a low resistance for high coolant temperatures. Therefore, it would have been obvious to one having ordinary skill in the art at the time the invention was made to modify the device of Gilbreth with the resistive device of Schutte for the purpose of improving reducing the fuel-air ratio and presenting a low resistance for high incoming temperature, and vice versa.
